

The background of the entire page is a close-up photograph of bright, orange and yellow flames, likely from a gas burner, rising and dancing. The flames are the most prominent visual element, occupying the left and bottom portions of the frame.

COMPLETE CONTROLS INC.

Since 1989

***Builders & Designers of
Advanced Combustion
Control Systems***

Combustion Controls

Typical Applications

- Heat Treat
- Metallurgy
- Petroleum Products
- Power Generation
- Research
- Wire Manufacturing

Complete Controls delivers rugged combustion control systems and equipment. Controls built ready to meet the most complex combustion applications or demanding environment.

Our in-house engineering and a skilled technicians have the technical experience it takes to assist you in design and then build combustion control systems to match your needs. Every system is fully tested before leaving our facility be assured your controls will meet the demands for efficient ignition & energy consumption, 24/7 operation, safety and cost effectiveness.

Combustion Control

Fast Ignition – Clean Burning Precise Control

When combustion is a critical part of production improved control of ignition and burn can make a significant impact on your bottom line. Complete Controls is experienced in the design and manufacture of single and multi-burner systems. We build some of the most sophisticated, efficient and cost effective combustion controls in the industry.

Our combustion control systems are complete including controls, blowers, burners, motors, sensors and monitors. Each system is designed for maximum safety with state of the art energy management and flame control and necessary safety devices.

Better Combustion Control Benefits

- Ignition on Command or Automatic – Precision Control
- Improved Burn – Saves Energy
- Clean Burn – Reduction in Emissions
- Increased Safety – Protects Equipment and Staff
- Combustion / Burner Centralized Control – Reduced Labor Costs
