Custom Control Panels

Control Panels that are designed and constructed specifically for an application can be a significant investment. Choosing control panels that have a reputation for long term reliability will protect your investment. Here are some of the features of Complete Controls custom panels:

- Enclosures are designed and manufactured to match environmental hazards that are encountered during operation
- Internal racks, wiring harness, instruments and controllers are securely mounted for maximum protection, ventilation and stability
- Designed and built to efficiently utilize available floor space and access requirements
- External controls and monitors are ergonomically designed for easy access and operation

Each control panel we build is carefully engineered and manufactured with the highest quality components then fully tested to assure it meets specifications before it leaves our door. Our control panels are ready to go to work as soon as they are installed.

We provide ongoing support and training that insures your control panels perform to the highest standards far into the future.

Control Panels from Complete Controls...

State of the Art – Fully Tested

Dependable – Rugged – Cost Effective
