

COMPLETE CONTROLS INC.

Since 1989

Builders & Designers of Advanced Temperature Control Systems

Typical Applications

- Ⓢ Metal Finishing
- Ⓢ Industrial Curing Ovens
- Ⓢ Refrigeration
- Ⓢ Food Processing & Baking
- Ⓢ Environmental Controls
- Ⓢ Manufacturing Processes

Complete Controls, Inc.

Temperature Control

When Temperature is Critical...

Whether you are making ice cream or applying a baked on finish to an auto part, the accurate control of time and temperature can mean the difference between a perfect product or a pile of scrap.

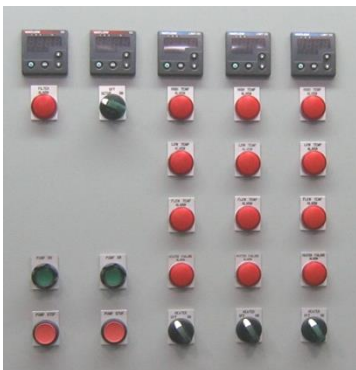

Efficient management of temperature relies on precision control and quality monitoring throughout the process. We build temperature management systems that match even the toughest specifications. Systems can be designed to use a minimum amount of space while providing easy access to monitors and control panels. For temperature critical operations real time remote alerts and monitoring can be included when you need an additional margin of safety.

Complete Controls offers a full line of temperature controls, sensors and monitoring equipment. If you are looking for replacement parts, sensors or monitors give us a call.

Precise, Reliable Temperature Control Offers

- Improved Quality – State of the Art Controls maintain precise temperature and timing control
- Energy Savings Potential
- Centralized and/or Remote Monitoring Options
- Reduced Scrap or Spoilage
- Increased Safety – Protects Staff, Equipment and inventory
